

ETHERNET CONTROLLER KEYPAD

The Color Kinetics[®] Ethernet Controller Keypad is a wall-mounted keypad that allows complete control over Color Kinetics Ethernet lighting installations at the touch of a button. The Ethernet Controller Keypad is designed for use with Color Kinetics Light System Manager (ITEM# 103-000015-00). Together, they are the perfect solution for any Color Kinetics Ethernet lighting installation that requires multiple scenes or shows, or multiple keypads. Just press a show button, and the custom Light System Composer light show (stored on Light System Engine) is displayed instantly. It also allows adjustment to the brightness, or even turn all the lights off, during show playback.

The Ethernet Controller Keypad features eight buttons for selecting shows, onboard LEDs to indicate the current show, dimmer controls, a master OFF switch, and transitions, which include: fade to black, snap, cross fade, and smooth show-to-show flow. Using Ethernet Controller Keypad with Light System Manager allows connection of multiple keypads to a Color Kinetics lighting system for convenient keypad access and control of light shows.

The keypad's compact design minimizes wall space required, while still offering a full set of lighting control features. Installation couldn't be easier: it mounts in a standard U.S. one-gang wall box, and requires only two wire connections to screw terminals for power and a CAT5e data cable for data.

FEATURES

- Eight show buttons
- Feedback LEDs to indicate show selection and status
- Dimmer controls
- Master OFF switch
- Transition
- Power supply included
- Uses conventional Ethernet wiring
