

i P L A Y E R™

iPlayer™ is a complete lighting show storage and playback system for Color Kinetics lights. Smaller than a deck of playing cards, iPlayer stores DMX512 shows produced either with Color Kinetics® ColorPlay™ software or on a lighting console. The included iPlayer software 1.0 enables a personal computer to import and edit DMX512 shows as well as to store shows on iPlayer. The entire system has been designed to be versatile and easy to use. A version of iPlayer for Macintosh computers will be introduced at a future date.

iPlayer is the perfect solution for designers who wish to deliver and play shows in multiple locations, such as in retail store chains, while simultaneously insuring consistency of presentation and image. Shows can be created at a corporate location, and easily distributed to field locations. For instance, unlike rack mounted playback units, iPlayer fits in a standard overnight courier envelope. The rewritable memory in iPlayer permits shows to be updated and stored without additional hardware investments. Additionally, distributing shows using the iPlayer system can be considerably less expensive than using floppy disk based playback systems.

iPlayer contains 2MB of non-volatile memory which stores a dynamic DMX512 stream. The length of show that can be stored depends upon a number of variables. The table below shows the maximum show length for various numbers of DMX addresses.

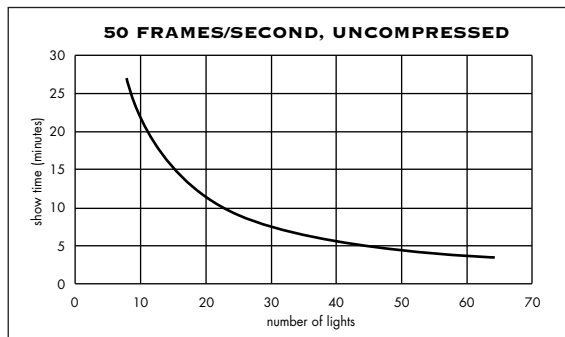

Unlike other playback units, iPlayer is compact. On site, it can mount directly to many Color Kinetics C-Series lights for power, eliminating the need for separate power cabling. The automatic restart function means that starting the show, such as at store opening or after a power failure, is literally effortless. And an LED indicator makes it easy to determine the iPlayer status, even from a distance.

In addition to iPlayer and iPlayer software 1.0, this package includes a power supply and all cabling required to connect the device to both a personal computer and Color Kinetics lights. Cables required for connecting to a DMX512 lighting console are available separately from Color Kinetics.

iPLAYER SOFTWARE 1.0 REQUIREMENTS

WINDOWS	Windows 95 or greater
FREE HARD DISK SPACE REQUIRED	2 MB
RAM REQUIRED	2 MB
LANGUAGE	English
CD-ROM DRIVE	

iPLAYER SHOW TIME

PACKAGE CONTENTS:

- iPlayer
- iPlayer Software 1.0
- iPlayer Power Supply
- Serial cable
- Serial port adapter
- RJ45 cable
- User Guide

MODEL # CON-PLY-01

U.S. PATENT 6,016,038
